

Initiative

We will show our initiative by *being resourceful and working without always being told what to do. Showing both perseverance and trusting in ourselves, in order to demonstrate that we can think independently and act when necessary.*

Spirituality

As part of our spiritual, moral and cultural development we will be considering whether *creation and science are conflicting or complementary of each other by reflecting and respectfully challenging views on both sides. We will be investigating rivers across the world and considering their purposes and how they have changed over time. In PSHE, we will be exploring healthy and unhealthy relationships, learning how to manage these relationships and how to understand other's feelings in various circumstances. We will be developing our strategies for working collaboratively.*

Learning Drivers

Creative arts

Using our creative skills, we will draw, label and annotate diagrams of rivers and coasts. We will create models of parts of the solar system to develop our understanding of the relationships between Earth, the moon and the sun. We will produce drawings of 3D objects, focussing on how to use shadows to show the position of a source of light.

Environment

As people concerned with our environment, we will learn about erosion and deposition in the river and how this process will change rivers over time. We will discuss the effects of pollution on some of the world's rivers. In computing, we will learn how technology has changed how we communicate with each other and discuss some of the advantages and disadvantages of this.
